

# Computing sessions 2022: assessment skill list

Skill category	Minimum	Satisfying	Very satisfying
<b>1. Knowing C-programming basics</b>	<ul style="list-style-type: none"><li>• Writing a “Hello World!” program</li><li>• Asking questions to the user</li><li>• Writing functions</li></ul>		
<b>2. Using the standard library</b>	<ul style="list-style-type: none"><li>• Using <code>std::cout</code>, <code>std::string</code>, <code>std::fstream</code></li></ul>	<ul style="list-style-type: none"><li>• Using <code>std::vector</code>, <code>std::stringstream</code> and <code>cmath</code>.</li></ul>	<ul style="list-style-type: none"><li>• Using algorithms, iterators and manipulators.</li></ul>
<b>3. Writing a C++ class</b>	<ul style="list-style-type: none"><li>• Writing a simple class with: constructor without and with arguments, destructor, mutators, accessors and “print” function.</li><li>• Instantiating and testing the implemented class.</li></ul>	<ul style="list-style-type: none"><li>• The class contains all the functionalities required by the specifications.</li></ul>	<ul style="list-style-type: none"><li>• Implementing operator overloading and copy constructor.</li><li>• Using properly the reserved keywords “const” and “static”.</li></ul>

# Computing sessions 2022: assessment skill list

4. Coding algorithms	<ul style="list-style-type: none"> <li>Algorithms work and give the correct results.</li> </ul>	<ul style="list-style-type: none"> <li>The code is robust: it is protected against bad inputs.</li> <li>Managing properly the dynamic memory allocation (delete).</li> </ul>	<ul style="list-style-type: none"> <li>The code is efficient: efforts are achieved for saving time.</li> </ul>
5. Using ROOT functionalities	<ul style="list-style-type: none"> <li>Plotting 1D and 2D histograms.</li> <li>Using the C++ interactive interpreter of ROOT.</li> </ul>	<ul style="list-style-type: none"> <li>Saving data in ROOT files.</li> <li>Fitting data with a predefined function.</li> </ul>	<ul style="list-style-type: none"> <li>Getting parameters of the fit.</li> </ul>
6. Building a program	<ul style="list-style-type: none"> <li>Compiling and linking a simple program.</li> <li>Reading compiler messages and fixing the code.</li> <li>Providing to the supervisors a compilable program.</li> </ul>	<ul style="list-style-type: none"> <li>Compiling a project based on several source files.</li> <li>Compiling with external libraries (especially ROOT)</li> </ul>	<ul style="list-style-type: none"> <li>Linux/MacOSX: using a Makefile for building a project.</li> <li>Windows: using a Visual Studio solution for dealing with a project.</li> </ul>
7. Documenting and preserving the code	<ul style="list-style-type: none"> <li>The source files are organized in folders.</li> <li>One file for each class.</li> <li>Saving the code on a git repository.</li> </ul>	<ul style="list-style-type: none"> <li>Documenting the code by putting comments (inside the source files: header for the file, ....)</li> <li>Commenting properly each git commit.</li> <li>Following the same code conventions in the same project.</li> </ul>	<ul style="list-style-type: none"> <li>Writing a README and INSTALLATION files for explaining the goal of the program and how to compile it.</li> <li>Generating Doxygen documentation related to the code.</li> </ul>
